

FRIESAIN COWS

By Jack

History:

A Friesian cow is a breed of cow known today as the world's highest production for dairy animals. Friesian cows produce more milk than any other cows. The aim for them was to produce as much milk and beef as possible from the same animal.

Classification:

They make outstanding milk products. They are large black and white cattle. When they are born they can weigh anything from 30kgs and they are 147 centimeters tall and 54 inches in shoulders. They should be bred at 15 months of age.

Habitat:

A Cows natural habitat is a paddock on farms, they are originally from Friesland.

Diet:

Friesian cows eat grass, maize, palm kernel, grass silage, bark if they are naughty and they drink water.

Predators:

Bears, Wolves, Snakes, Tigers, Lions, Leopards, Coyotes, wild Dogs are all predators for the Friesian Cow.
