

Room 2  
Gordonton School  
Woodlands Road, RD 1  
Hamilton

Dear Mr McNair and The BOT,

In our class we are finding it hard to work in the heat of summer. Sometimes we go to the computer room just so that we can be in a cooler environment. The heat affects our thinking. Also the heat of summer brings out flies which really annoy us. We think that all classrooms should have Air Conditioning.

**Facts:**

The Air Conditioning is better for people that have allergies from pollen because the Air Conditioning cleans the air. You wouldn't need to open the doors because the Air Conditioning would be on.

We would not have to try and get the flies off ourselves because the doors and windows would be shut. Also our work won't blow everywhere.

Air Conditioning is a good thing for winter because it would mean we don't have the heaters on the wall. We would have more room to display the quality work that we produce. We believe that with an energy efficient heat pump/ Air Conditioner, the costs to run would be equal to if not lower than our existing diesel boiler and fans. With a heat pump/ Air Conditioner, classes would be able to control the temperature of the learning environment.

**Conclusion:**

So in conclusion, we think that if we had Air Conditioning it would be a better environment for us all and it would be easier to learn.

Yours Sincerely

Sabina and Petra
